LeafFilter Offline Field App Deployment Guide

Version reviewed July 1, 2026
For managers deploying the Price Proposal Planner to the sales team.

Purpose

This guide explains how to deploy the upgraded LeafFilter Price Proposal Planner so reps can use the app in the field with weak or no internet after the app has been opened or installed once while online.

Key reality

The pricing tool can work offline after it is cached on the device. Google Sheets backup still requires internet. Offline deals stay local and sync later when the device reconnects.

What reps get	What managers deploy
- Pricing calculator, presentation screens, print summary, and local Deal Library work without signal after the app is cached.	- Updated Apps Script files for Google Sheets backup.
- Clear status: Online, Offline, Pending Sync, or Synced.	- Static PWA files for true offline install behavior.
- Pending cloud backups remain local until internet returns.	- A final HTTPS team link from the static host.

Files In The Reviewed Package

- Index.html
- Code.gs
- manifest.webmanifest
- service-worker.js
- leaf-filter-icon.svg
- OPEN_AND_COPY_Index_html_CODE.txt
- OPEN_AND_COPY_Code_gs_CODE.txt

Package name

LeafFilter_Field_App_PWA_REVIEWED_2026-07-01.zip

Manager Deployment Steps

1 Update Google Apps Script backup

- Open the Google Sheet where proposal deals should back up.
- Go to Extensions > Apps Script.
- Replace Code.gs with the reviewed Code.gs.
- Replace Index.html with the reviewed Index.html.
- Deploy > Manage deployments > New version.
- Copy the Web App URL ending in /exec. This is the cloud backup endpoint.

2 Host the offline field app on an HTTPS static host

- Upload Index.html, manifest.webmanifest, service-worker.js, and leaf-filter-icon.svg to Netlify, Vercel, GitHub Pages, company hosting, or another HTTPS static host.
- Do not send reps a 127.0.0.1 link. That only works on one computer.
- The final rep link should be the hosted HTTPS Index.html link.

3 Connect the static app to Google Sheets backup

- Open Index.html before hosting or redeploying it.
- Find the STATIC_CLOUD_BACKUP_URL setting.
- Paste the Google Apps Script /exec URL inside the quotes.
- Upload the updated Index.html to the static host.

```
const STATIC_CLOUD_BACKUP_URL = 'https://script.google.com/macros/s/YOUR_DEPLOYMENT_ID/exec';
```

4 Run admin QA before sending the team link

- Open the hosted app while online.
- Store one test deal.
- Confirm the status shows Synced when cloud backup succeeds or Pending Sync when cloud backup is unavailable.
- Open Deal Library and confirm the saved deal appears.
- Run the Apps Script admin self-test from the Apps Script web app if needed.
- Delete the test deal from the Deal Library after QA.

Rep Rollout Instructions

Message to reps

Open the new app link while you have internet before appointments. Add it to your home screen if possible. The app can keep working without signal after it has been loaded or installed. Store each deal before leaving the home. Pending backups sync when internet returns.

How Reps Should Use It

- Open the final hosted HTTPS app link while online.
- On iPad or iPhone, tap Share, then Add to Home Screen. On Android or Chrome, use Install app or Add to Home screen when offered.
- Open the saved field app once while online before leaving for appointments.
- Use the app normally in the home, even when signal is weak or unavailable.
- Tap Store Deal after each proposal. If offline, the deal saves locally and shows Pending Sync.
- When internet returns, open Deal Library and tap Sync Pending Cloud Backups if needed.

Status Guide

Synced	No pending cloud backups.	No action needed.
Pending Sync	One or more deals are saved locally and waiting for Google Sheets backup.	Sync when internet returns.
Offline	The app is usable locally, but Google backup is not available.	Keep saving deals locally.
Online	Device has internet. Cloud backup can run if endpoint is configured.	Store or sync pending deals.

Troubleshooting

- If the app will not open with no signal, the rep probably did not load or install it while online first.
- If deals show Pending Sync, that is expected when offline or when Google backup is unavailable.
- If many deals remain pending after reconnecting, open Deal Library and tap Sync Pending Cloud Backups.
- If cloud backup still fails, verify the Apps Script /exec URL is pasted into STATIC_CLOUD_BACKUP_URL and that the Apps Script deployment is accessible.
- If the app is updated later, reps should open the hosted link again while online so the latest version can cache on their device.

Do not use local preview links

Never send a 127.0.0.1 or file:/// link to the sales team. Those are local testing links only. Send the final hosted HTTPS app link.
